RE: Water Monitoring Plan Report, 2nd Quarter 2021, for Dolese Bros. Co. Davis Quarry, Murray County, Oklahoma

Dear Mr. Tutkowski:

According to the Oklahoma Water Resources Board's Title 785, Chapter 30, Subchapter 15, Part 4, *Mines with Preexisting Exemptions*, Dolese Bros. Co. Davis Quarry qualifies as a mine with a preexisting exemption. As part of maintaining this exemption status, the regulation's require us to do the following:

1. Adopt and implement a plan to monitor and report to the Board the accumulation and disposition of pit water during the previous calendar year;
 - The Davis Quarry has adopted and implemented such a plan, and the tables below serve to report to the Board the accumulation and disposition of pit water during 2nd Quarter 2021.
2. Make quarterly and annual reports of the measured or reasonably estimated groundwater and surface water volumes, separately stated, entering the pit, of the water that is diverted from the pit, of the disposition of the water from the pit, and of the consumptive use of the water from the pit on or before the deadlines provided by Title 82 of Oklahoma Statutes, § 1020.2(E)(1);
 - The Davis Quarry has continued to fulfill this obligation by compiling and submitting this 2nd Quarter 2021 report. The specific information requested in this section is outlined in the tables shown below.
3. At any time after March 31, 2015, demonstrate to the satisfaction of the Board within the pertinent report or reports that the mine has not consumptively used during the previous twelve-month period, from the mining site, an amount of groundwater which combined with any amounts used from permitted groundwater wells exceeds the MEPS¹. Such demonstration may require providing to the Board a copy of the mine's monitoring plan and all the data collected and procedures used to support the calculations and results reported.
 - After 31 March 2015, the Davis Quarry will be willing to demonstrate to the Board that the mine site has not consumptively used during the previous twelve-month period from the mining site, an amount of groundwater which combined with any amounts used from permitted groundwater wells exceeds the MEPS. Example calculations used in the First Quarterly Monitoring Report for 2013 have already been submitted to the OWRB for review and analysis.

Water Monitoring Plan Report
2nd Quarter 2021
for Dolese Bros. Co. Davis Quarry
Murray County, Oklahoma

Below, in Tables 1, 2, and 3, are shown the 2nd Quarter 2021 summary data collected at the Davis Quarry.

Table 1

Accumulation & Disposition of Pit Water during 2nd Quarter 2021

| | <u>Groundwater</u> Acre-Feet | <u>Surface Water</u> Acre-Feet | <u>Total</u> Acre-Feet |
|---|---------------------------------|---------------------------------------|---------------------------|
| Water Entering The Mine Pit | 221.37 | 198.63 | 420.00 |
| Water Diverted From The Mine Pit Into Fresh Water Lake | 221.32 | 198.59 | 419.90 |
| Water Removed From Fresh Water Lake | 637.48 | 891.45 | 1528.93 |
| Water Returned To Fresh Water Lake | 682.64 | 954.59 | 1637.23 |
| Water Returned To Land Surface Overlying ASA² Basin | 115.29 | 161.23 | 276.52 |
| Water Consumptively Used | 33.10 | (See Table 3 for Calculations) | |

Table 2

Water Fluctuations in Fresh Water Lake during 2nd Quarter 2021

| | |
|--------------------------------|-------------------------|
| Average Size of Lake | 32.73 acres |
| Gain in Water Elevation | 3.52 feet |
| Gain in Lake Volume | 115.20 acre-feet |

Table 3

Consumptive Use Summary for 2nd Quarter 2021

| Activity or Location | Amount of Pit Water Used, Acre-Feet | Groundwater Content, Percent | Groundwater Component, Acre-Feet |
|---|--|---|---|
| 1 North Water Well | 0.00 | All | 0.04 |
| 2 South Water Well | 0.00 | All | 0.10 |
| 3 Material Moisture Hauled from Site | 5.86 | 0.4169 | 2.45 |
| 4 Land Application for Roadway Dust Suppression | 28.51 | 0.4169 | 11.89 |
| 5 Evaporation from Mine Pit | 0.10 | 0.5271 | 0.05 |
| 6 Offsite Dewatering | 44.57 | 0.4169 | 18.58 |
| Total Groundwater Consumption from ASA at Davis Quarry = 33.10 Acre-Feet | | | |

Water Monitoring Plan Report
2nd Quarter 2021
for Dolese Bros. Co. Davis Quarry
Murray County, Oklahoma

Below, in Table 4, please find the Groundwater Rights Summary for the Davis Quarry.

Table 4
Summary of Groundwater Rights for Davis Quarry

| |
|---|
| From Acreage on the Arbuckle-Simpson Aquifer And Included in the ASA Groundwater Rights $(1,186 \text{ ac. on ASA}) * (0.2 \text{ ac-ft/acre}) = 237.2 \text{ acre-feet on the ASA}$ |
| From Acreage off the Arbuckle-Simpson Aquifer And Excluded from the ASA Groundwater Rights $(1,630 \text{ ac. off ASA}) * (2.0 \text{ ac-ft/acre}) = 3,260 \text{ acre-feet off the ASA}$ |

Based on the plan that we have adopted and implemented to monitor and report the accumulation and disposition of pit water, based on our actual consumptive use of groundwater quantities, and based on the timely submittal of all reports including this 2nd Quarter 2021 report, we believe the Davis Quarry is in full compliance with all of the regulations that allow us to maintain its preexisting exemption.

General Information

Our calculations show that Davis Quarry's total estimated groundwater consumption for 2nd Quarter 2021 was 33.10 acre-feet. This equates to about 13.95% of Davis Quarry's Equal Proportionate Share (EPS) for the year.

- The calculations show the groundwater consumption to be fairly low for a variety of reasons. The primary reason was that only 44.57 acre-feet of water was discharged offsite, and only 18.58 acre-feet of this total was considered groundwater.
- Even though the cumulative rainfall total was significant (19.1 inches), the Fresh Water Lake (FWL) was fairly low at the start of the quarter, so it was able to hold most of the runoff from these rains. This lake gained 3.52 feet during the quarter and it is now nearly full. It is likely that we will need to discharge some additional water from the FWL during the Third Quarter.
- During this quarter, the entire amount of groundwater consumed was related to the following activities: the groundwater usage from two (2) small water wells, material moisture hauled from the site, dust suppression waters, evaporation of Mine Pit water, and offsite dewatering.
- Our present belief is that the current floor of the Mine Pit is above the water table of the Arbuckle Simpson Aquifer. Most of the time, we still use a small electric pump to keep this Mine Pit (work area) dewatered. This pump is having to return any storm water that enters the pit to the FWL along with any FWL leakage or groundwater seepage. When we have heavy storms at the site as we did during Second Quarter 2021, we rented a portable diesel pump that assisted the electric pump until the volume of the storm was transferred from the Mine Pit to the FWL.

JUL 19 2021

Oklahoma Water Resources Board

Water Monitoring Plan Report
2nd Quarter 2021
for Dolese Bros. Co. Davis Quarry
Murray County, Oklahoma

To recap, we have 237.2 acre-feet of groundwater rights per year available over the ASA at the Davis Quarry location, but our total available water rights for this site also includes other significant groundwater rights we have at another site that also overlies the ASA in Murray County. These additional groundwater rights equate to approximately 266.6 acre-feet per year from 1,333 acres of land that overlies the ASA. Both the Davis Quarry property and the other land we own are located within the western lobe of the ASA. Essentially, we have 503.8 acre-feet ($237.2 + 266.6 = 503.8$) of groundwater available to us at this facility.

During 2nd Quarter 2021, the Davis Quarry logged 19.1 inches of rainfall, as measured using rain gauges. The effective runoff into the quarry pits and lakes from these rains was estimated to be 9.34 inches. The largest rainfall event during the quarter was 5.5 inches, and three (3) other rain events exceeded 1.5 inches, including rains of 1.6, 1.7, and 1.8 inches.

The "calculated" groundwater percentage in the Fresh Water Lake was 41.69% for 2nd Quarter 2021, and storm water comprised the other 58.31%. These percentages typically vary each quarter due to the fluctuations in rainfall amounts and intensities in addition to the amount of leakage from the FWL. The leakage rate of the FWL into the Mine Pit is based on the water elevation in this lake; whereas, a higher-level tends to leak more. Usually, the groundwater concentrations are lowest during rather wet quarters like this one, and highest during dry quarters. This trend proved to be true this quarter.

In the Annual Water Monitoring Reports for this quarry we have always included more of the details regarding the water calculations and how they were performed than are shown in the Quarterly Reports. The Annual Reports also detail how we always try to use the least controversial methods of calculating and estimating groundwater consumption at this facility. Since these detailed explanations were recently covered in the Annual Report for 2020, I will not outline them again in this quarterly report.

As we stated for many quarters, water management always has been and continues to be very important to us at Dolese Bros. Co., especially at the Davis Quarry. We understand that the Arbuckle Simpson Aquifer is a unique aquifer that must be protected. Our plant personnel make daily efforts to responsibly manage the waters within our quarry boundaries so that when they return to their nearby homes and properties, these same quality waters will be available for their personal and community uses.
